

CLAIMS

What is claimed:

1. An optical fiber enclosure, comprising:
 - a housing having a front compartment, a rear compartment, a first and a second side and a bulkhead;
 - 5 a plurality of optical fiber cassettes mounted to the bulkhead; and
 - at least one splice module.
2. The optical fiber enclosure of Claim 1 wherein the optical fiber cassette includes adapters, fiber optic connectors, a front face, a side wall, a rear face, at least one fanout device and at least one ribbon pigtail.
- 10 3. The optical fiber enclosure of Claim 2 wherein the adapters are mounted to the front face of the cassette, the side wall is attached between the front face and the rear face to provide space for optical fiber management, the fanout devices are mounted to the rear face of the cassette to provide fanout of the ribbon pigtails to individual optical fibers that terminate at the fiber optic connectors, and the fiber
- 15 optic connectors are coupled to the adapters at the front face of the cassette.
4. The optical fiber enclosure of Claim 1 wherein the splice module includes an optical fiber management plate and a hingedly joined splice door.
5. The optical fiber enclosure of Claim 4 further comprising a plurality of optical fiber splices mounted to the splice door.
- 20 6. The optical fiber enclosure of Claim 4 wherein the splice door includes a removable splice tray for mounting optical fiber splices and for managing associated slack fiber loops around the splices.

7. The optical fiber enclosure of Claim 1 further comprising at least one fiber radius guide mounted to the housing.
8. The optical fiber enclosure of Claim 1 further comprising at least one removable panel mounted to the bulkhead.
- 5 9. The optical fiber enclosure of Claim 1 further comprising at least one port on a top surface and a bottom surface of the first and second side for fiber management.
10. An optical fiber cassette, comprising:
a plurality of adapters;
10 a plurality of fiber optic connectors;
a front face;
a side wall;
a rear face;
at least one fanout device; and
15 at least one ribbon pigtail.
11. The optical fiber cassette of Claim 10 wherein the adapters are mounted to the front face of the cassette, the side wall is attached between the front face and the rear face to provide space for optical fiber management; the fanout devices are mounted to the rear face of the cassette to provide fanout of the ribbon pigtails to
20 individual optical fibers that terminate at the fiber optic connectors, and the fiber optic connectors are coupled to the adapters at the front face of the cassette.
12. A splice module, comprising:
a management plate; and
a hingedly joined splice door.

13. The splice module of Claim 12 wherein the splice door includes a removable splice tray for mounting optical fiber splices and for managing associated slack fiber loops around the splices.
14. The splice module of Claim 12 further comprising a plurality of optical fiber
5 splices mounted to the splice door.
15. The splice module of Claim 12 integrated in an optical fiber enclosure.
16. A fiber radius guide, comprising:
a body having a first end and a second end, the first end having a pair of
first supports extending therefrom, the second end having a second support
10 member extending therefrom; and
a hood, wherein the fiber radius guide is adapted for reversible mounting
to an enclosure.
17. A removable fiber optic adapter, comprising:
a body; and
15 at least one engagement member.
18. An optical fiber enclosure, comprising:
a housing having a front compartment, a rear compartment, a top surface,
a bottom surface, a first side, a second side and a bulkhead;
a plurality of optical fiber cassettes;
20 the front compartment having a first optical management system, the first
optical management system having a front management plate, at least one fiber
radius guide; and

the rear compartment having a second optical management system, the second optical management system having a rear management plate, and a plurality of ribbon fanout devices for routing management.

19. The optical fiber enclosure of Claim 18 wherein at least one of the front and rear management plates is mounted on the top surface of the housing.
20. The optical fiber enclosure of Claim 18 wherein at least one splice module is located in the rear compartment.
